Dimensions

- L x W x H 800mm x 438mm x 88mm

Boost your performance with a technology 10x faster than traditional SSDs

Purpose-built for media and entertainment

As seasoned video professionals ourselves, we know the struggle of getting lost in overly complex workflows, keeping an eye on your storage fill level staying below 80% and worrying about optimizing your allocation strategy for VFX or Color Grading. That's why we developed ELEMENTS BOLT: a groundbreaking storage solution that is much more powerful than regular systems while still being easy-to-use.

Utilizing revolutionary NVMe storage technology

Experience the delight of ultra short response time and unmatched streaming performance by using a brand new protocol that allows much faster connections. It doesn't

require any defragmentation resulting in virtually no seek times at all – even when working on 8k and more video material. On top of that, the ultra efficient technology only needs around 1/10 of the power consumption of a regular system with 200 TB of high-performance shared storage in a 2U Chassis.

Purpose-built for media and entertainment

With ELEMENTS BOLT you will be able to provide media assets to every department in your facility, from scanning, to color grading, editing, compositing, VFX and GFX – and every other application. On top of that, the exceptionally intuitive web-based GUI embraces useful tools to manage projects, organize assets and automate tasks.
